

PATIENT GROUP DIRECTION (PGD)

The supply of Levonorgestrel 1.5mg Tablets for Emergency Contraception (LNG-EC) by community pharmacists working within the boundaries of East Sussex County Council (ESCC)

Version 5

TABLE OF CONTENTS

CONTENTS	PAGE NUMBER
Authorisation and Signatures	2
Characteristics of Staff	3
Individual authorisation to supply Levonorgestrel 1.5mg tablets using this PGD	4
PGD for the supply of Levonorgestrel 1.5mg tablets for emergency contraception	5

Community pharmacy contractors using this PGD must ensure that it is formally approved and signed by a senior pharmacist, a senior doctor and the governance lead for the organisation with legal authority, so that this document meets legal requirements for a PGD.

The pharmacist must be authorised by name, under the current version of this PGD before working according to it.

CHANGE HISTORY	
Version/Date	Change details
Version 5	Updated Summary of Product Characteristics (SPC) Updated Faculty of Sexual and Reproductive Healthcare (FSRH) guidance

Date PGD comes into effect	1 st April 2024
PGD Review date	September 2026 or earlier in the light of significant changes in best practice
PGD Expiry date	31 st March 2027

NAME/ROLE	SIGNATURE	DATE
GP in Public Health Dr Lisa Sansom East Sussex County Council		2/2/2024
Public Health Pharmacist Janet Rittman East Sussex County Council		2/2/2024
Darrell Gale Director of Public Health East Sussex County Council		22.02.24

Short Life Working Group Membership

Name	Designation
Janet Rittman*	Pharmacist
Dr Lisa Sansom*	Doctor
Tony Proom	Strategic Commissioning Manager - Sexual Health
Paula Sowter	Consultant Nurse in Contraception
Dr Isabel Okpaluba	Consultant in Sexual Health
Julia Powell	Chief Executive Officer Community Pharmacy Surrey and Sussex

* Core working group members and PGD signatories

PGDs do not remove inherent professional obligations or accountability. It is the responsibility of each professional to practice only within the bounds of their own competence and in accordance with the General Pharmaceutical Council (GPhC) Standards for Pharmacy Professionals and Pharmaceutical Society of Northern Ireland (PSNI) Code of Ethics for Pharmacists.

No PGD can envisage every clinical situation. Pharmacists are expected to exercise professional judgement and discretion. In any situation where there is a concern a doctor must be consulted.

Individual practitioners must declare that they have read and understood the Patient Group Direction and agree to supply/administer medicines listed only in accordance with the PGD within the specified start and expiry dates. The original copy, signed by all those concerned, should be kept in a designated place within the community pharmacy, and be readily accessible for reference and audit purposes.

The pharmacist must work within the service specification agreed between the contracted pharmacy and the commissioning organisation.

Patient group direction effective from 1st April 2024

HEALTHCARE PROFESSIONALS AUTHORISED TO SUPPLY UNDER THIS PGD

ESCC authorises the use of this PGD by accredited community pharmacists who are working within the boundaries of **East Sussex County Council**

DECLARATION: I am a registered pharmacist, working at

Name of Pharmacy	
Address	
Post Code	

Characteristics of Staff

I have read this Patient Group Direction (PGD) and confirm that:

Qualifications

I am registered with the General Pharmaceutical Council (GPhC) or Pharmaceutical Society of Northern Ireland (PSNI)

Specialist qualifications and competencies

I am competent to provide the Community Pharmacy: Emergency Hormonal Contraception (EHC) to individuals aged 25 and under, Public Health Local Service Agreement (PHSLA) <https://www.eastsussex.gov.uk/social-care/providers/health/contracts/public-health-local-service-agreements-phlsas-for-gp-practices-and-pharmacies/community-pharmacies> because:

1. I have completed the accreditation and training requirements detailed in the Community Pharmacy: EHC to individuals aged 25 and under PHSLA.
2. I have completed the Emergency Hormonal Contraception Declaration of Competence (DoC) on the Centre for Pharmacist Postgraduate Education (CPPE) website <https://www.cppe.ac.uk/services/declaration-of-competence> within the last 2 years. Pharmacists' personalised statement of declaration should be retained, which may need to be provided to commissioners and/or employers when required via the [CPPE Viewer](#).
3. I have completed the mandatory Health Education England Safeguarding Children level 2 and Safeguarding Adults level 2 e-learning for healthcare (this can be accessed through the CPPE website https://www.cppe.ac.uk/programmes/l/safegrding_elfh-e-02/ and passed the associated level 2 assessment within the last 2 years.
4. I have reviewed my competency to operate under this PGD using the [NICE Competency Framework for health professionals using patient group directions](#)
5. I am aware of local safeguarding policies and contact information. Information is available via the following links <https://www.esscp.org.uk> <https://www.eastsussexsab.org.uk>

6. I have reviewed the local policies and documentation for this service and references associated with this PGD.
7. I am aware that it is my responsibility to keep up to date with changes to the recommendations for this medicine and acknowledge any limitations to my knowledge or competence. I will complete continuing professional development as defined by the GPhC or PSNI and take part in an audit as detailed in the service specification.

The decision to supply any medication rests with the individual registered health professional who must abide by the PGD and any associated organisational policies.

Name	GPhC/PSNI registration number	Signature	Date

Authorising manager/pharmacist

I confirm that the registered health professionals named above have declared themselves suitably trained and competent to work under this PGD. I give authorisation on behalf of the Community Pharmacy for the above-named health care professionals who have signed the PGD to work under it.

Name	Designation	Signature	Date

<p>1. Clinical condition or situation to which this PGD applies</p>	<p>To reduce the risk of pregnancy after unprotected sexual intercourse (UPSI) or regular non-hormonal contraception has been compromised or used incorrectly.</p>
<p>1.1 Criteria for inclusion</p>	<ul style="list-style-type: none"> • Any individual 13 to 25 years of age presenting for emergency contraception (EC) preferably within 12 hours and no later than after 72 hours (may also be used between 72-96 hours after UPSI but efficacy decreases with time, off label use between 72-96hrs - see section 2.4) or when regular contraception has been compromised or used incorrectly. For guidance refer to the Faculty of Sexual and Reproductive Healthcare (FSRH) Decision-making Algorithms for Emergency Contraception in the following document pages ix, x. FSRH Guideline Emergency Contraception March 2017, amended July 2023) http://www.fsrh.org/pdfs/CEUguidanceEmergencyContraception11.pdf • The individual has no contraindications to the medication. • Individuals 26 years of age or over who cannot easily obtain EC from another NHS source without undue delay (exceptional circumstances only). • All options for emergency contraception discussed and the individual prefers the hormonal method. • The individual has taken LNG but has vomited the tablet within 3 hours of taking. The new dose must still be within 72 hours (96 hours off label) of the first UPSI of that episode. • Must be able to give informed consent to treatment. Informed consent is the process by which a patient learns about and understands the purpose, benefits, and potential risks of a treatment and then agrees to receive the treatment. • Consents to consultation and medication supply by a pharmacist without referral to a doctor.
<p>1.2 Criteria for exclusion</p>	<ul style="list-style-type: none"> • Age <13 years or > 25 years of age. Individuals 26 years of age or over can be included in exceptional circumstances- refer to inclusion criteria. • Informed consent not given. • Individuals under 16 years old and assessed as lacking capacity to consent using the Fraser Guidelines. • Individuals 16 years of age and over and assessed as lacking capacity to consent. • If under 13 years of age follow local safeguarding policy https://www.esscp.org.uk • Child Sexual Exploitation (CSE) concerns- follow local safeguarding policy https://www.esscp.org.uk • Safeguarding concerns refer to local safeguarding policy https://www.eastsussexsab.org.uk • This episode of UPSI occurred more than 96 hours ago. N.B. A dose may be given if there have been previous untreated or treated episodes of UPSI within the current cycle if the most recent episode of UPSI is within 96 hours.

	<ul style="list-style-type: none"> • Known or suspected pregnancy. N.B. a previous episode of UPSI in this cycle is not an exclusion. If UPSI occurred > 21 days ago and no or abnormal period, advise individual to complete a pregnancy test before supplying EC. • Less than 21 days following childbirth. • Less than 5 days following abortion, miscarriage, ectopic pregnancy or uterine evacuation for gestational trophoblastic disease(GTD) • Known hypersensitivity to the active ingredient or to any component of the product -- see Summary of Product Characteristics • Use of ulipristal acetate (UPA-EC) emergency contraception in the previous 5 days. • Acute porphyria • Taking a medicine or herbal product (for example St John's Wort) that interacts with LNG-EC (see section 2.9). Refer to the British National Formulary (BNF) or the Faculty for Sexual and Reproductive Healthcare (FSRH) CEU guidance: Drug interactions with hormonal contraception https://www.fsrh.org/standards-and-guidance/current-clinical-guidance/drug-interactions/ <p>Please note: It may be appropriate to supply individuals taking enzyme inducing drugs (or within 4 weeks of stopping) with an increased dose of LNG-EC. Refer to section 2.5.</p> <p>It is imperative to contact the Sexual Health Service (SHS) for advice if the pharmacist has any concerns about supplying LNG-EC. Refer to the East Sussex Sexual Health website for contact information https://www.eastsussexsexualhealth.co.uk</p>
<p>1.3 Cautions including any relevant action to be taken</p>	<ul style="list-style-type: none"> • All individuals should be informed that insertion of a copper intrauterine device (Cu-IUD) within five days of UPSI or within five days from earliest estimated ovulation is the most effective method of emergency contraception. If a Cu-IUD is appropriate and acceptable supply oral EC and refer to the appropriate health service provider. • UPA-EC can delay ovulation more effectively than levonorgestrel (LNG-EC), when taken closer to the time of ovulation. Consider UPA-EC if the individual presents in the five days leading up to estimated day of ovulation. If UPA-EC is not appropriate then Levonorgestrel (LNG-EC) is licensed for EC up to 72 hours (up to 96 hours off label) after UPSI. The evidence suggests that LNG-EC is ineffective if taken more than 96 hours after UPSI. • LNG-EC is ineffective if taken after ovulation. • If an individual vomits within 3 hours from ingestion a repeat dose may be given. • If individual is taking enzyme-inducing drugs (or herbal products for example St John's Wort) or has taken them in the last 28 days (includes prescribed and purchased medicines) – refer for Cu-IUD or supply of a 3mg dose of LNG-EC. Refer to section 2.5. • Body Mass Index (BMI) >26kg/m² or weight >70kg – individuals should be advised that though oral EC methods

	<p>may be safely used, a high BMI may reduce the effectiveness. A Cu-IUD should be recommended as the most effective method of EC. If LNG-EC is to be given see dosage section 2.5.</p> <ul style="list-style-type: none"> • Consideration should be given to the current disease status of those with severe malabsorption syndromes, such as acute/active inflammatory bowel disease or Crohn's disease. Although the use of LNG-EC is not contra-indicated it may be less effective and so these individuals should be advised that insertion of Cu-IUD would be the most effective emergency contraception for them and referred accordingly if agreed. • If the individual is less than 16 years of age an assessment based on Fraser guidelines must be made and documented. • If the individual is less than 13 years of age the healthcare professional should speak to local safeguarding lead and follow the local safeguarding policy. • If the individual has not yet reached menarche consider onward referral for further assessment or investigation
<p>1.4. Action to be taken if the individual is excluded or declines treatment</p>	<ul style="list-style-type: none"> • Explain the reasons for exclusion to the individual and signpost or refer to SHS or GP as soon as possible with information about further options, including referral to SHS for consideration of copper intrauterine device (Cu-IUD). • Individuals 26 years of age or older should be given the option to purchase EC over the counter (if appropriate) or be referred to the SHS or GP. • If pregnancy is suspected (i.e. If UPSI occurred > 21days ago and no or abnormal period) supply free pregnancy test and ask individual to complete the test (as soon as possible as the supply of EHC is time critical i.e. straight away) before supplying EHC. If individual is unable to return to the pharmacy refer to SHS. • If exclusion is due to a drug interaction consider if UPA-EC could be supplied as an alternative to LNG-EC and/or refer for Cu-IUD • Safeguarding (including child sexual exploitation) concerns identified at presentation should be referred to the East Sussex Safeguarding Children Partnership (ESSCP) https://www.esscp.org.uk • Follow local safeguarding arrangements for vulnerable adults when appropriate https://www.eastsussexsab.org.uk/# • Individuals who lack capacity to consent should be referred to SHS or GP for a Best Interest Assessment undertaken by an authorised prescribing practitioner http://www.legislation.gov.uk/ukpga/2005/9/contents • Record the reason for the declination in the individual's patient medication record (PMR). • Document all actions taken.

2. Description of treatment

2.1 Name, strength & formulation of drug	Levonorgestrel 1.5 mg tablet ((N.B. this is equivalent to 1500 mcg levonorgestrel)
2.2 Legal category	Pharmacy Only Medicine (P)/ Prescription Only Medicine (POM)
2.3 Route of administration	Oral, with or without food. Taking with or after food may reduce the incidence of nausea and vomiting a known side effect.
2.4 Off label use	<p>Best practice advice given by Faculty of Sexual and Reproductive Healthcare (FSRH) is used for guidance in this PGD and may vary from the Summary of Product Characteristics (SPC).</p> <p>This PGD includes off-label use in the following conditions:</p> <ul style="list-style-type: none"> ○ use between 72 and 96 hours post UPSI. ○ increased dose for individuals with BMI over 26kg/m² or weight over 70kg ○ increased dose for individuals using liver enzyme inducing agents. ○ severe hepatic impairment ○ individuals with previous salpingitis or ectopic pregnancy ○ lapp-lactase deficiency ○ hereditary problems of galactose intolerance ○ glucose-galactose malabsorption <p>Note some products may be licenced only for certain age groups (e.g. 16 years and over) – supply of these products outside the licensed age groups is permitted under this PGD.</p> <p>Medicines should be stored according to the conditions detailed in the Storage section in this table. However, in the event of an inadvertent or unavoidable deviation of these conditions the local pharmacy or Medicines Management team must be consulted. Where drugs have been assessed by pharmacy/Medicines Management in accordance with national or specific product recommendations as appropriate for continued use this would constitute off-label administration under this PGD. The responsibility for the decision to release the affected drugs for use lies with pharmacy/Medicines Management.</p> <p>Where a drug is recommended off-label consider, as part of the consent process, informing the individual/parent/carer that the drug is being offered in accordance with national guidance but that this is outside the product licence.</p>
2.5 Dose and frequency of administration	<ul style="list-style-type: none"> • Levonorgestrel 1.5 mg (1 tablet) to be taken as soon as possible up to 96 hours of UPSI. • Dose for those individuals taking enzyme inducing medicines or herbal products: An individual who requests LNG-EC whilst using enzyme-inducing drugs, or within 4 weeks of stopping them, should be advised to take a total of 3mg levonorgestrel (two 1.5 mg tablets) as a single dose and within 96 hours of UPSI. Note the effectiveness of this regimen is unknown.

	<ul style="list-style-type: none"> • Dose for those individuals with a body mass index of more than 26kg/m² or who weigh more than 70kg: An individual who requests LNG-EC with a body mass index of more than 26kg/m² or who weighs more than 70kg should be offered a total of 3mg LNG-EC (two 1.5 mg tablets) as a single dose and within 96 hours of UPSI. Note the effectiveness of this regimen is unknown.
<p>2.6 Duration of treatment</p>	<ul style="list-style-type: none"> • A single dose is permitted under this PGD. • If vomiting occurs within 3 hours of LNG-EC being taken a repeat dose can be supplied under this PGD. • Repeated doses, as separate episodes of care, can be given within the same cycle. Please note: <ul style="list-style-type: none"> ○ If within 7 days of previous LNG-EC offer LNG-EC again (not UPA-EC) ○ If within 5 days of UPA-EC then offer UPA-EC again (not LNG-EC)
<p>2.7 Quantity to be supplied</p>	<ul style="list-style-type: none"> • Single dose – to be administered in the pharmacy or dispensed and appropriately labelled for the individual to take away. • Two tablets should be supplied for individuals taking enzyme inducing drugs and/or individuals with a BMI of more than 26kg/m² or who weigh more than 70kg.
<p>2.8 Storage of products</p>	<p>Medicines must be stored securely according to national guidelines and in accordance with the product SPC.</p>
<p>2.9 Drug interactions</p>	<p>A detailed list of drug interactions is available in the SPC, which is available from the electronic Medicines Compendium website: www.medicines.org.uk or the BNF www.bnf.org</p> <p>Additional Sources of information include:</p> <ul style="list-style-type: none"> • Stockley’s Drug Interactions https://about.medicinescomplete.com/publication/stockleys-drug-interactions/ • Faculty for Sexual and Reproductive Healthcare (FSRH) CEU guidance: Drug interactions with hormonal contraception https://www.fsrh.org/standards-and-guidance/current-clinical-guidance/drug-interactions/ • For interactions with post-exposure prophylaxis for sexual exposure to HIV (PEPSE) regimes it is recommended to check with the online University of Liverpool HIV Drug Interactions Checker https://www.hiv-druginteractions.org/checker <p>If necessary, access the individuals NHS Summary Care Record (SCR) (with consent) if they are uncertain about the medications they are taking.</p>
<p>2.10 Identification & management of adverse reactions</p>	<p>A detailed list of adverse reactions is available in the SPC, which is available from the electronic Medicines Compendium website: www.medicines.org.uk and BNF www.bnf.org</p>

	<p>The following side effects are common with LNG-EC (but may not reflect all reported side effects):</p> <ul style="list-style-type: none"> • Nausea and vomiting are the most common side effects. • Headache, dizziness, fatigue, low abdominal pain and breast tenderness, diarrhoea. • The FSRH advises that bleeding patterns may be temporarily disturbed and spotting may occur, but most individuals will have their next menstrual period within seven days of the expected time.
<p>2.11 Management of and reporting procedure for adverse reactions</p>	<p>In the event of untoward or unexpected adverse reactions:</p> <ul style="list-style-type: none"> • If necessary, seek appropriate emergency advice and assistance. • Document in the individual patient medication record and complete incident procedure if adverse reaction is severe (refer to local organisational policy) • Healthcare professionals and individuals are encouraged to report suspected adverse reactions to the Medicines and Healthcare products Regulatory Agency (MHRA) using the Yellow Card reporting scheme on: http://yellowcard.mhra.gov.uk. • Report any adverse reactions via the organisation incident policy.
<p>2.12 Written information and further advice to be given to individual.</p>	<ul style="list-style-type: none"> • All methods of emergency contraception should be discussed. All individuals should be informed that fitting a Cu-IUD within five days of UPSI or within five days from the earliest estimated ovulation is the most effective method of emergency contraception. • Explain mode of action, dosage, side effects, and follow-up advice. Provide manufacturer's patient information leaflet (PIL) and discuss content. • Advise individual to take the tablet with or after food. If vomiting occurs within 3 hours, a second dose should be taken as soon as possible. Advise individual to return to the pharmacy for a second dose or to contact the SHS. • Explain that menstrual disturbances can occur after emergency hormonal contraceptives. • Provide advice on ongoing contraceptive methods, including how these can be accessed. • Advise that after oral EC there is a pregnancy risk if there is further UPSI and ovulation occurs later in the same cycle. Recommend use of appropriate contraceptive methods and how these can be accessed. Supply condoms as needed. • Repeated episodes of UPSI within one menstrual cycle - the dose may be repeated more than once in the same menstrual cycle should the need occur. • Individuals using hormonal contraception should restart their regular hormonal contraception immediately. Avoidance of pregnancy risk (i.e. use of condoms or abstain from intercourse) should be advised until fully effective. • Advise a pregnancy test three weeks after treatment especially if the expected period is delayed by more than seven days or abnormal (e.g. shorter or lighter than usual),

	<p>or if using hormonal contraception which may affect bleeding pattern.</p> <ul style="list-style-type: none"> • A free pregnancy test should be issued to individuals 26 years of age or under. Individuals must be advised to go to SHS or GP if the pregnancy test is positive. • There is no evidence of harm if someone becomes pregnant in a cycle when they had used emergency hormonal contraception. • Discuss long term contraception options and refer individual to the Sexwise website https://www.fpa.org.uk/ https://www.sexwise.fpa.org.uk to access further information. • Concurrent use of a barrier method should be encouraged and provided. The risks of sexually transmitted infections (STIs) should be discussed. and a self-testing chlamydia /gonorrhoea swab provided and explained how to use. • Individuals presenting for repeat supplies of EC should be referred to the SHS for additional support. • Advise to consult a pharmacist, nurse or doctor before taking any new medicines including those purchased. • Give individual the opportunity to ask questions and address any concerns or queries. • Provide contact information for SHS or refer to website https://www.eastsussexsexualhealth.co.uk
<p>2.13 Advice/follow up treatment</p>	<ul style="list-style-type: none"> • The individual should be advised to seek medical advice in the event of an adverse reaction. • The individual should attend an appropriate health service provider if their period is delayed, absent or abnormal or if they are otherwise concerned. • Pregnancy test as required (see advice to individual above). • Refer to SHS or GP for further advice about on-going contraception and screening for sexually transmitted infections (STI).

<p>3. Records</p>	<p>Record the consultation and clinical assessment as prompted on the Pharmoutcomes (PO) emergency contraception template, include additional notes on the PMR when necessary.</p> <p>Individuals should be made aware of the confidentiality policies for the service they are attending, including the circumstances in which confidentiality may need to be breached.</p> <p>The Pharmoutcomes template will record the following information:</p> <ul style="list-style-type: none"> • The consent of the individual and <ul style="list-style-type: none"> ○ If individual is under 13 years of age record action taken ○ If individual is under 16 years of age document capacity using Fraser guidelines. If not competent record action taken. ○ If individual over 16 years of age and not competent, record action taken. • Safeguarding referral if relevant.
--------------------------	--

	<ul style="list-style-type: none"> • Individual's name, date of birth and first 3-4 characters of postcode i.e. TN34. This is a confidential service that can be accessed without a full address and GP notification. • Relevant past and present medical history, including medication history. Examination findings where relevant e.g. weight • Any known medication allergies • Date of supply • Name of registered health professional operating under the PGD • Record the name and dose of the medication and the number of packs supplied with batch numbers and expiry dates. • Any advice given about the medication including side effects, benefits, how to take it and when, and what to do if any concerns. • Details of any adverse drug reactions and any action taken. • Any supply outside the terms of the product marketing authorisation • Advice given, including advice given if excluded or declines treatment. • Any referral arrangements • Any follow up arrangements • Recorded that supplied via Patient Group Direction(PGD) • For adults all PGD documentation in a patient's clinical record must be kept for 8 years after the last entry. • For children all PGD documentation in a patient's clinical record must be kept until the child is 25 years old or for 8 years after a child's death. <p>Records should be signed and dated (or a password-controlled e-records) and securely kept for a defined period in line with local policy.</p> <p>All records should be clear, legible and contemporaneous.</p> <p>A record of all individuals receiving treatment under this PGD should also be kept for audit purposes in accordance with local policy.</p>

Appendix 1

Under 16s- Fraser Guidelines

In England, Wales and Northern Ireland, in order to provide contraception to young people under 16 years of age without parental consent, it is considered good practice to follow the Fraser Guidelines/criteria.

While the Fraser Guidelines below relate specifically to contraceptive advice or treatment, the principles are applicable to other sexual health services for young people under 16. A young person's age should not be a barrier to them accessing condoms.

Competence is demonstrated if the young person is able to:

Understand the treatment, its purpose and nature, and why it is being proposed
Understand its benefits, risks and alternatives
Understand in broader terms what the consequences of the treatment will be
Retain the information for long enough to use it and weigh it up in order to arrive at a decision.

A young person is competent to consent to contraceptive advice or treatment if:

- The young person understands the professional's advice.
- The professional cannot persuade the young person to inform their parents or allow the professional to inform the parents that they are seeking contraceptive advice.
- The young person is very likely to begin or continue having intercourse with or without the contraceptive treatment.
- Unless they receive contraceptive advice or treatment, the young person's physical or mental health or both are likely to suffer.
- The young person's best interests require the professional to give contraceptive advice, treatment or both without parental consent.
